

CHEESE

Coconut Cheddar v3.0

DECISION SNAPSHOT

ADVANCE TO NEXT GATE — CONDITIONAL

READINESS STAGE

Conditional Advancement · Limited evidence

Proceed to pilot-scale confirmation and target-consumer concept validation. This is not approval for market launch. The sensory GO result is supporting evidence only.

CONCEPT VISUAL

Not attached

CORE STRENGTH

Sensory descriptor profile (99/100) gives the product a credible lead proof point.

MAIN WATCH POINT

Texture rebuild: Lift overall texture liking by reinforcing creamy, smooth, firm cues through formulation and process controls.

RECOMMENDED NEXT ACTION

Advance to pilot-scale sensory confirmation and target-consumer concept validation before any external launch.

Executive Summary / Commercial Readout

02

A decision memo for product, R&D, design, and commercial leaders.

DECISION

Coconut Cheddar v3.0 should advance into controlled commercialization preparation, conditional on closing the items below before any external launch.

RATIONALE

The saved GO decision is supported by an ISSF score of 76.7 and 91% model confidence. Sensory descriptor profile leads at 99/100; Texture performance is the lowest dimension at 43/100.

EXECUTIVE RECOMMENDATION

Coconut Cheddar v3.0 reached a sensory GO at ISSF 76.7 (91% confidence). The sensory descriptor profile is distinctive and gives the product a clear, defensible sensory identity to build messaging around.

NEXT MOVE

Advance to pilot-scale sensory confirmation and target-consumer concept validation before any external launch. In parallel, close the watch points and approval gates listed in the commercialization plan before external distribution.

Product Performance Dashboard

Performance is shown as a commercial decision aid: each result states the evidence and the action or story it supports.

OVERALL SENSORY ACCEPTANCE

84/100

EVIDENCE

Threshold 60/100 · n=14 · Overall liking 7.6/9, Flavour 7.6/9, Appearance 7.8/9 · benchmark: Trained-panel reference 86/100

BUSINESS IMPLICATION

Acceptance is strong enough to lead the buyer story with the product experience.

TEXTURE PERFORMANCE

43/100

EVIDENCE

Threshold 60/100 · n=14 · Creamy 8.4/10, Smooth 8.6/10, Grainy 1.8/10, Chalky 1.2/10 · benchmark: Category readiness line 60/100

BUSINESS IMPLICATION

Texture is a commercialization risk and should be optimized before packaging or claims are locked.

SENSORY DESCRIPTOR PROFILE

99/100

EVIDENCE

Threshold 60/100 · n=14 · Cheese 13/14 (93%), Butter 12/14 (86%), Lactic acid 11/14 (79%), Milk 11/14 (79%) · benchmark: Category-positive descriptor target

BUSINESS IMPLICATION

The sensory descriptor profile is distinctive and gives the product a clear, defensible sensory identity to build messaging around.

POSITIVE EMOTIONAL RESPONSE INDICATORS

86/100

EVIDENCE

Threshold 60/100 · n=14 · Positive 4.4/5, Negative 0.8/5 · benchmark: Net emotional valence +3.6

BUSINESS IMPLICATION

The product creates a positive response that can support an engaging, benefit-led story.

EVIDENCE BOUNDARY

No concept responses are available. Concept preference and purchase intent have not been validated.

HOW TO READ THESE SCORES

All dimension scores are 0–100, higher is better. ISSF = Integrated Sensory Screening Framework, the composite suitability score behind the GO / TWEAK / STOP decision. Model confidence reflects how complete and consistent the sensory evidence is — not market demand. n = number of concept-test responses collected.

Key Commercial Insights

The strongest commercial conclusions from the current evidence, translated into decisions for product, design, and go-to-market teams.

1 Sensory descriptor profile is the lead proof point

WHAT THE EVIDENCE SUGGESTS

Sensory descriptor profile is the highest decision dimension at 99/100.

WHY IT MATTERS COMMERCIALY

The sensory descriptor profile is distinctive and gives the product a clear, defensible sensory identity to build messaging around.

RECOMMENDED ACTION

Build the first buyer-facing message around sensory descriptor profile and preserve it through scale-up.

2 Texture performance sets the development agenda

WHAT THE EVIDENCE SUGGESTS

Texture performance is the lowest dimension at 43/100.

WHY IT MATTERS COMMERCIALY

Texture is a commercialization risk and should be optimized before packaging or claims are locked.

RECOMMENDED ACTION

Lift overall texture liking by reinforcing creamy, smooth, firm cues through formulation and process controls. Recheck the dimension after the next prototype.

3 Capture concept descriptors to sharpen the product story

WHAT THE EVIDENCE SUGGESTS

No concept descriptors have been captured yet (no concept responses recorded).

WHY IT MATTERS COMMERCIALY

Without panelist-described language, buyer-facing copy would rely on invented marketing terms that the evidence does not support.

RECOMMENDED ACTION

Add a check-all-that-apply descriptor question to the concept test and collect a target-consumer panel before locking copy.

4 Concept evidence should match the size of the claim

WHAT THE EVIDENCE SUGGESTS

0 responses provide limited concept evidence.

WHY IT MATTERS COMMERCIALY

The direction is useful for iteration, but it is not yet a demand forecast or representative consumer claim.

RECOMMENDED ACTION

Run a broader target-consumer validation before final packaging, volume assumptions, or demand claims.

Concept and Packaging Direction

How the product should be positioned, expressed, and refined before external use.

VitaCheese

A plant-based coconut cheddar positioned for everyday use.

POSITIONING	Familiar cheddar character with a coconut base.
TARGET CONSUMER	25-35
PRICE POINT	Price point requires validation.

DIRECTIONAL CONCEPT VISUAL

PACKAGING DIRECTION

The directional packaging expresses the VitaCheese positioning and is a review stimulus, not final artwork.

CORE MESSAGE

The sensory descriptor profile (99/100) and emotional response (86/100) support a positive product experience.

WHY THIS SUPPORTS THE PRODUCT

A selected visual is required to connect the product strategy to a credible shelf and buyer-review direction.

REFINE BEFORE EXTERNAL USE

- Confirm hierarchy, mandatory copy, and pack architecture with design.
- Validate price, format, and concept language with the priority consumer.
- Complete claims and legal review before any external or production use.
- Create and select a directional packaging visual.

Commercialization Plan

The decision advances only when each workstream has a named owner, a clear deliverable, and evidence for the next gate.

Workstream	Current read	Required action	Status / owner
Product formulation	GO with open action: Texture rebuild	Lift overall texture liking by reinforcing creamy, smooth, firm cues through formulation and process controls.	Open · R&D
Sensory validation	76.7 ISSF; 91% confidence	Confirm the product at pilot scale against the saved decision profile.	Open · Sensory
Texture optimization	43/100 texture performance	Run a focused texture optimization and repeat validation.	Open · R&D
Packaging	No selected concept visual	Finalize structure, hierarchy, materials, and production feasibility.	Open · Design
Claims/legal review	No external claims approval stored	Substantiate and approve every sensory, nutrition, and benefit claim.	Open · Legal
Buyer story	VitaCheese with limited concept evidence	Build a concise story around the strongest sensory proof point and target use case.	Open · Commercial
Source data/provenance	Decision record and method are traceable	Attach source files, panel definition, and approval record to the final report.	Open · Project lead

NEXT DECISION GATE

Next gate: pilot-scale sensory confirmation plus broader target-consumer concept validation.

Risks and Watch Points

These are the issues most likely to change the commercial decision, weaken the buyer story, or delay launch readiness.

Risk	Commercial impact	Mitigation	Next decision gate
Product risk Texture rebuild: Lift overall texture liking by reinforcing creamy, smooth, firm cues through formulation and process controls.	A changed or inconsistent product experience could erode the evidence supporting the GO decision.	Set pilot-scale acceptance ranges and repeat the critical sensory measures.	Pilot validation
Concept/packaging risk No packaging direction is selected.	Buyer feedback may focus on unfinished design choices instead of the product proposition.	Label the stimulus as directional and complete design refinement before external use.	Design review
Claims risk Sensory and concept results do not independently substantiate broad benefit claims.	Unsupported copy creates legal exposure and can undermine buyer confidence.	Create a claim-by-claim evidence matrix and obtain legal approval.	Claims approval
Evidence/source risk Concept read is based on 0 responses.	Directional preference could be overstated as representative demand.	Document panel fit and expand validation before making broad market claims.	Evidence review
Execution risk Owners and completion dates are not stored in the report snapshot.	Open actions can drift across R&D, design, legal, and commercial teams.	Assign one accountable owner and due date to every plan row.	Readiness review

CLAIMS AND LIMITATIONS

No concept responses have been collected, so consumer preference and purchase-intent claims are unsupported. Texture performance (43/100) is below the readiness line and must be remediated before any performance claim. Substantiate every sensory, nutrition, and benefit claim against named evidence and complete legal review before external use.

Appendix / Source Record

Traceability fields are retained here so the commercial story remains readable while every decision can still be audited.

Concept visual provenance	No concept visual attached.
Source data notes	Saved sensory decision evidence plus 0 concept responses. Instrumental measures are not itemized in this snapshot.
Approval status	draft

APPROVAL AND DISTRIBUTION

Working report version. Cross-functional approval is required before external distribution.

Report at a Glance

The decision, supporting evidence, main watch point, and immediate work required before the next gate.

GO

COMMERCIAL DECISION

Advance to pilot-scale sensory confirmation and target-consumer concept validation before any external launch.

Conditional GO — Texture performance is below the 60/100 readiness line and must be remediated before launch; the decision rests on sensory data only — no concept validation has been collected (n=0).

ISSF SCORE

76.7

MODEL CONFIDENCE

91%

CONCEPT EVIDENCE

Limited · n=0

Evidence snapshot

CORE STRENGTH

Sensory descriptor profile leads at 99/100.

MAIN WATCH POINT

Texture performance is lowest at 43/100. Set pilot-scale acceptance ranges and repeat the critical sensory measures.

Immediate priorities

Priority / risk	Required action	Owner	Gate
Product risk	Set pilot-scale acceptance ranges and repeat the critical sensory measures.	R&D	Pilot validation
Concept/packaging risk	Label the stimulus as directional and complete design refinement before external use.	Design	Design review
Claims risk	Create a claim-by-claim evidence matrix and obtain legal approval.	Legal	Claims approval

NEXT GATE

Next gate: pilot-scale sensory confirmation plus broader target-consumer concept validation.
